

PMG-WG T - TAC - B5

Permanent Magnet Generator for Wind Microturbines

PMG-WG is a high efficiency generator for wind turbines, manufactured with permanent magnets (Nd-Fe-B) in order to obtain high power density and very compact size.

NSM's experience and accurate tests have allowed us to develop a product with very low cogging, so that the wind turbine spins even with minimum wind speed.

Current range includes micro wind generators that can supply continuous output power from 1,2 to 6kVA, with a high overload capacity (max kVA) for a limited time span.

On request, NSM can develop highly customized solutions.

These configurations consist in an inner wound stator (fixed part) and an outer rotor with magnets (rotating part), ready for direct drive application.

Technical characteristics

Standard voltage

PMG-WG 185: 380V

PMG-WG 295: 400V

Other voltages on request

Insulation class H

Protection IP 55

Model	Power [kVA]	Max Power [kVA]	Cogging [Nm]	rpm	Weight		
					T [kg]	TAC [kg]	B5 [kg]
PMG-WG 185SC	1,2	1,8	< 0,60	415	22,5	27	41
PMG-WG 185MA	2	3,6	< 1,20	415	31,5	35,5	49
PMG-WG 185LA	4	5,8	< 1,60	415	40	43,5	60
PMG-WG 185XLB	6	9,5	< 3,20	415	---	70	100
PMG-WG 295H	3	3,9	< 5,00	150	82	---	---
PMG-WG 295P	6	8,5	< 7,50	150	123	---	---
